

KEY FEATURES OF SUBLIGLAZE INDUSTRIAL COATINGS

Subliglaze coatings are organic coatings specially formulated and applied to give a durable finish with excellent chemical resistance on a large range of varying substrates. Subliglaze coatings allow excellent dye sublimation images to be achieved.

Subliglaze products contain only organic resins. The resins used are specially selected so that fully reacted coatings are nontoxic and are totally suitable for mouth contact. They comply with the requirements of European Toy Regulations EN71: Part 3 and C.O.N.E.G. Regulations for North America.

Subliglaze products have superior chemical resistance to substances such as alcohol, acetone, alkaline solutions, acidic solutions and together with their outstanding water resistance (relevant to pasteurisation and dishwasher properties) they are ideal for all dye sublimation needs.
